Mark	20%
Class Average	19%

General Feedback (For everyone)

- Technical skills are often listed rather than evidenced; a clearly structured **Projects section** with outcomes, tools, roles, and implemented systems is essential.
- Greater prioritisation is needed, technical strengths and project highlights should appear prominently on the first page.
- Skills sections frequently need clearer categorisation, reduced repetition, and stronger hierarchy.
- Academic results are a strength but must be formatted consistently (rounded percentages, correct symbols, clear module titles).
- Language should be concise, precise, and professional, avoiding inflated, abstract, or overly narrative phrasing.
- Bullet points, spelling, capitalisation, punctuation, and number formatting must be consistent; careful proofreading is required.
- Layout and template choices should maximise clarity, reduce unnecessary white space, and ensure strong visual hierarchy.
- Creativity should be demonstrated through curated project evidence rather than descriptive statements of passion.
- Hobbies and extracurricular experience should be reframed to highlight transferable skills and professional relevance.

Personal Feedback

Overall Comment

This CV presents a clear and focused early-stage game development profile with relevant academic study and foundational Unity and C# experience. The content is appropriately aligned with a first-year student seeking placement. The main areas for improvement relate to depth of project detail, and refinement of structure.

Content Relevance & Clarity

The CV includes relevant technical skills such as Unity, C#, Git, level design, and pixel art. The profile summary clearly states the intention to seek placement within the games industry, which is positive and focused.

However, while the CV mentions the creation of multiple games in both 2D and 3D, there is no dedicated Projects section. This is a missed opportunity. Brief summaries outlining what was built, mechanics implemented, tools used, and specific contributions would significantly strengthen the application. At present, skills are described in general terms rather than demonstrated through outcomes.

The Skills section is structured but could be tightened. Some descriptions are longer than necessary and could be made more concise. Additionally, the first page should prioritise the most impactful information. A Projects section placed above or alongside Skills would strengthen the first impression.

Grammar & Spelling

Grammar is generally strong, and writing is clear. There are minor issues such as:

- “it’s features” should be “its features.”
- Minor spacing inconsistencies.

Date formatting is consistent, which is positive. A careful proofreading pass would ensure complete polish.

Professionalism & Tone

The tone is appropriate and professional. The profile summary is concise and clearly communicates career intent. Work experience is presented clearly and demonstrates responsibility, logistics awareness, and reliability.

The hobbies section is relevant and aligned with game systems thinking, but could be slightly condensed to maintain focus on industry-relevant content.

Customisation & Creativity

The tone is appropriate and professional. The profile summary is concise and clearly communicates career intent. Work experience is presented clearly and demonstrates responsibility, logistics awareness, and reliability.

The hobbies section is relevant and aligned with game systems thinking, but could be slightly condensed to maintain focus on industry-relevant content.
